

Press Release

Date 090421

ILMEG Products AB, the well-known manufacturer of dust control systems for the rock excavation industry, builds a new factory.

The new production facility is designed to produce the newly developed dust collector series, the X-series. The company has fully implemented "Lean" ideas in all departments in order to produce the X-series dust collectors with the highest productivity and in an environmentally friendly way.

The factory is planned to open in May this year.

"Our target is to have the most productive factory in the world for dust collector systems. By implementing methods like "Lean Production" in all departments supported by the new factory layout we are convinced that we will reach our target" says Marie-Louise Eriksson, Vice President ILMEG Products AB "We want to be perceived by our customers as an innovative supplier with a long term commitment to the industry. We are now both introducing a completely new range of dust collectors and at the same time building the new factory supporting these ideas" Marie-Louise concludes
